

The City of Watertown, Massachusetts is requesting written quotations for the installation of a new Ammonia Detection System for its ammonia-based ice hockey rink refrigeration/compressor system at the John A. Ryan Arena. The Contractor shall furnish all labor, services, materials, equipment, plant, machinery, apparatus, appliances, tools, supplies, trash disposal of old equipment, and all other things necessary to do all the work required for the completion of the project. Such quote needs to meet the specifications listed below. Complete list of specifications is included with this document, below as Appendix A.

Written quotations will be accepted beginning at 9am on Wednesday, March 15, 2023 until 11am on Wednesday, March 29, 2023, by emailing: **Purchasing@Watertown-MA.gov**. In the subject line of your email, please state “Quote for Ammonia Detection System”

**Scope – Ammonia Detection:** A licensed Massachusetts electrician well versed in ammonia detection will supply and install the following Calibration Technologies ammonia (NH3) detection equipment:

- 2- GG-NH3-250 Sensors (Engine room)
- 1- GG-NH3-2% sensor (Engine room)
- 1 -GG-VL2-NH3 sensor. (Vent line)
- 1 – GG-6 controller with analog output board with 4/20 mA board
- 1- GG-RD1 Remote display
- 3 – Horn/strobe. (Blue Ammonia)
- 1 – GG-EM2-24 entrance monitor (next to EAP panel)

The horn/strobes to be located in the following locations:

- 1 – Inside engine room.
- 1 – Above exterior engine room door.
- 1 – Outside rink entrance.

All horn/strobes will be labeled as “Ammonia”

- Remove old electrical wiring and conduits that have been eliminated from this project. Label all new installations.
- M&M Controls Upgrade to accept new sensors
  - Integrate leak detectors
  - Update NH3 function to add disable alarm and NH3 alarm output
  - Add 1 exhaust fan w/temperature, leak & override control
  - Update PC Graphics & reports
  - Update PC Software for new screen/alarms
  - Update control specification & master electrical drawing
- Must have installed a minimum of 10 similar units in ammonia-based refrigeration plants.
- Familiarity with and working on or around ammonia-based rink compressor refrigeration systems
- Must provide All manufacturers’ warranties for the equipment.

**Installation of the above components:**

- Low voltage wiring to be done in open style similar to other wiring in the area. EMT to be provided for vertical drops or where subject to damage.
- Provide analog lines from GG-6 to RCP.
- Wire and connect so that engine room intake/exhaust system will be activated upon NH3 detection.
- Provide dry contact for alarm company. (Connection by others)
- Supply and install wiring from GG-6 to (4) remote NH3 sensors
- Supply and install wiring from GG-6 to (3) remote horn strobes described above
- Wire and connect new components so that refrigeration system will shut down as is typical during an NH3 detection. Provide relays needed to link individual systems

Prevailing Wage Rates as determined by the Commissioner of the Department of Labor and Industries under the provisions of Massachusetts General Laws, Chapter 149, Section 26 to 27G, as amended, apply to this project. It is the responsibility of the Contractor to provide the City with certified payrolls and to comply with all requirements of the above-cited statutes. The schedules of prevailing wage rates are included in the Contract Documents, listed below as Appendix B.

Contractor is able to furnish labor that can work in harmony with all other elements of labor employed or to be employed in the work; All employees to be employed at the worksite will have successfully completed a course in construction safety and health approved by the United States Occupational Safety and Health Administration that is at least 10 hours in duration at the time the employee begins work and they shall furnish documentation of successful completion of said course with the first certified payroll report for each employee; and All employees to be employed in the work subject to this contract have successfully completed a course in construction safety and health approved by the United States Occupational Safety and Health Administration that is at least 10 hours in duration.

The City's liability hereunder shall be to make all payments when they shall become due, and the City shall be under no further obligation or liability. Nothing in this Agreement shall be construed to render the City or any elected or appointed official or employee of the City, or their successors in office, personally liable for any obligation under this Agreement.

The Contractor acknowledges and agrees that it is acting as an independent contractor for all work and services rendered pursuant to this Agreement, and neither the Contractor, nor its employees, agents, servants nor any person for whose conduct the Contractor is responsible shall be considered an employee or agent of the Town for any purpose.

The Contractor shall indemnify, defend, and hold the City harmless from and against any and all claims, demands, liabilities, actions, causes of actions, costs and expenses, including attorney's fees, arising out of the Contractor's breach of this Agreement or the negligence or willful misconduct of the Contractor, or the Contractor's agents or employees.

The Contractor shall obtain and maintain during the term of this Agreement the insurance coverage in companies licensed to do business in the Commonwealth of Massachusetts, and acceptable to the City as set out in the Invitation for Bids.

All policies shall identify the City as an additional insured (except Workers' Compensation) and shall provide that the City shall receive written notification at least 30 days prior to the effective date of any amendment or cancellation. Certificates evidencing all such coverages shall be provided to the City upon the execution of this Agreement, and at least ten (10) days prior to the renewal of any such coverage. Each such certificate shall specifically refer to this Agreement and shall state that such insurance is as required by this Agreement. Failure to provide or to continue in force such insurance shall be deemed a material breach of this Agreement and shall be grounds for immediate termination.

## **Ammonia Detection System Codes and Design Specifications**

October 27, 2021  
*Revision 10*

---

# Ammonia Detection System Codes and Design Specifications

Following is a discussion of ammonia detection system design for facilities utilizing ammonia refrigeration systems. Regulations for the ammonia refrigeration industry have dramatically changed in the last 10 years.

Beginning with 2021 editions of the Uniform, International, NFPA, and ASHRAE codes and standards, you only need to consider recommendations from IIAR when you evaluate your ammonia detection system for compliance.

In addition to IIAR standards, you should always consider any local amendments or supplemental requirements of your local authority having jurisdiction (AHJ), recognized and generally accepted good engineering practices (RAGAGEP), and your insurance company. Many insurance carriers impose their own requirements to mitigate the risk of loss of life and product in a facility.

What follows is a system design that meets the requirements all of the above-mentioned influences. This document is updated periodically, and it is recommended that you check our website ([www.ctiengineering.com](http://www.ctiengineering.com)) for the latest revision.

Table 1: Ammonia Detection System Overview

Location	Sensor	Actions
Compressor Room (minimum 2 sensors)	GG-NH3-250 (low range detector)	<b>25 ppm</b> - Alarm to monitored location <b>25 ppm</b> - Horn Strobe outside each entrance and inside engine room <b>150 ppm</b> - Emergency Ventilation
Compressor Room (minimum 1 sensor)	GG-NH3-2% (high range detector)	<b>10,000 ppm</b> - Redundant Emergency Ventilation* <b>20,000 ppm</b> - De-energize pumps, compressors, and normally closed valves
Vent Line*	GG-VL2-NH3	<b>1%</b> - Alarm to monitored location*
Refrigerated Areas	GG-NH3-100	<b>25 ppm</b> - Alarm to monitored location <b>25 ppm</b> - Horn Strobe* <b>35 ppm</b> - Close liquid and hot gas solenoid valves*
Packaged Systems		<b>See Table 1.2</b>
Enclosed Equipment	GG-NH3-2%	<b>20,000 ppm</b> - Disable ignition sources
Machinery under 100 HP and equipment Pits (not in machine rooms)	GG-NH3-100	<b>25 ppm</b> - Alarm to monitored location <b>25 ppm</b> - Close liquid and hot gas solenoid valves <b>25 ppm</b> - Horn Strobe inside room <b>25 ppm</b> - De-energize pumps, motors, and non-emergency fans <b>25 ppm</b> - Emergency Ventilation

\*Not required by code

Table 1.2: Packaged System Detection Overview

Location	Specification 1	Specification 2	Detection Level (See Appendix 3, page 8)
Indoor	Over 100 HP Inside a Compressor Room		Machinery Room Detection Level
	Under 100 HP Outside a Compressor Room	Potential of 40,000ppm? Yes	Level 3 Detection
		Potential of 40,000ppm? No	Level 1 Detection
Outdoor	Free Aperture? Yes	No detection required	
	Free Aperture? No	Under 100 HP	Level 1 Detection
		Over 100 HP	Machinery Room Detection Level

## **Compressor Room (0-250 ppm sensors)**

Code requires audio-visual indication inside the compressor room and outside each entrance to the compressor room at 25 ppm. From the gas detection control panel or PLC, the warning outputs can be set at 25 ppm to activate a horn / strobe unit inside the engine room and outside each entrance. Entrance monitor display units can be located outside each doorway to warn personnel of ammonia concentrations prior to entry. Audio-visual alarms can automatically reset if the ammonia concentration drops below 25 ppm.

Code requires emergency ventilation at 150 ppm. The alarm setpoints should be set at 150 ppm and trigger the emergency ventilation fan starter. Emergency ventilation and visual alarms should be latched until manually reset by a switch located in the machinery room. Audible alarms shall continue to operate until they are manually reset by a switch located in the machinery room, or an area remote from the machinery room.

The compressor room is the highest risk location in most plants. It has the most potential leak sources, and the most ammonia available for disastrous concentrations. Using a minimum of two 0-250 ppm sensors is necessary for complete coverage and redundancy. Use two 0-250 ppm ammonia gas sensors in Engine Rooms 4,000 square feet or less. Install an additional sensor for each additional 2000 square feet. Locate sensors in the breathing zone ~ 5 feet off the floor. Locate one sensor below the ventilation fan so it samples airflow from throughout the room when the fan is on. Locate other sensor(s) evenly distributed throughout the room.

## **Compressor Room Shutdown (0-2% sensor)**

In the compressor room, code also requires shutdown of compressors, pumps, and normally closed solenoid valves at a very high concentration (20,000 ppm is industry standard). The alarm output can be used to shut down at 2% (20,000 ppm). For redundancy at no cost, the warning output can be used to also trigger emergency ventilation at 1% (10,000 ppm). Use one 0-2% sensor located ~ 5 feet off the floor below the emergency ventilation fan so it samples airflow from throughout the room in an emergency condition. Note that a sensor in this range cannot be used to detect lower concentrations covered by the 0-250 ppm sensor.

## **Vent Line**

Vent line sensors are used to provide an alarm to a monitored location in the event of a safety relief valve opening from an overpressure condition. This alerts operators to discharges of ammonia to atmosphere through the vent line so they can take action to mitigate the release. An alarm setpoint of 1.0% (10,000 ppm) is recommended for this application to minimize alarms due to “weeping” relief valves. Locate vent line sensors outdoors, 3 ft off the roof, utilizing the provided mounting kit with the tee test-port facing down.

## **Refrigerated Rooms**

In refrigerated rooms, code requires alarming to a monitored location. Some insurance companies require shutdown of liquid feed and hot gas solenoids in the event of a leak (but the major codes currently do not). Use 0-100 ppm sensors in these rooms. This range gives the best accuracy at very low concentrations which is appropriate in these unrestricted areas. From the gas detection panel or PLC, the warning output can alarm to a monitored location at 25 ppm. Additionally, the alarm output can be used to shut down the liquid feed and hot gas solenoids at 35 ppm to mitigate the leak.

Locate sensors in the breathing zone ~ 5 feet off of the floor. The quantity of sensors should be determined by locating at least one sensor within 30 horizontal feet of each potential leak source (one sensor located between 2 evaporators could cover them both if they are 60 feet apart). In large, open cold storage warehouse rooms where this results in more than 3 sensors in a room, distances can reasonably be relaxed to 50 horizontal feet from a potential leak source, with a minimum of 3 sensors.

## **Machinery under 100 HP not in Machine Rooms, and Equipment Pits**

Where an ammonia refrigeration system or equipment is installed outside of a machinery room, the area containing the system or equipment shall comply with the following. At 25 ppm, alarm to a monitored location, close liquid feed and hot gas solenoid valves, activate audio/visual devices inside the area, activate emergency exhaust and de-energize all pumps, motors and non-emergency fans.

Use 0-100 ppm sensors in these rooms. This range gives the best accuracy at very low concentrations which is appropriate in these areas. Locate sensor(s) in the breathing zone ~ 5 feet off of the floor.

## **Packaged Systems**

Packaged systems and equipment shall comply with the following. At 25 ppm, alarm to a monitored location and activate audio/visual devices inside the area.

Use 0-100 ppm sensors in these areas. This range gives the best accuracy at very low concentrations which is appropriate in these areas. Locate sensor(s) in the breathing zone ~ 5 feet off of the floor.

Enclosed equipment with a potential to reach 40,000 ppm that has either open flame or hot surfaces, or has unclassified equipment shall comply with the following. Use one 0-2% detector to disable the ignition sources at 2% (20,000 ppm). Note that a sensor in this range cannot be used to detect lower concentrations covered by the 0-250 ppm sensor.

## **Installation Design Requirements**

### **General**

Detectors shall use supervised wire runs such that any faults in the wiring are reported to a monitored location. Loss of communication between the detector and the control system(s) that enables response shall be reported to a monitored location. Detectors shall actively monitor primary sensing elements and report any trouble signal to a monitored location. Audible alarms should provide an SPL of 15 decibels (dBA) above the average ambient sound level, and 5 dBA above the maximum sound level of the area in which it is installed. All ammonia detectors shall be designed and tested in accordance with UL-61010-1 or ANSI/ISA 92.0.01.

### **Sensor Mounting Height**

There is much confusion in the industry concerning the best height to mount ammonia sensors. This is because there are valid reasons for different heights. Codes simply say "locate sensor where it is expected to be the most effective, and can be accessed for maintenance and testing". Ammonia vapor is lighter than air so vapor leaks will rise to the ceiling in normal conditions. A liquid leak will drop to the floor and if large enough can cool down a room so quickly that high concentrations are found on the floor with very low concentrations at the ceiling. In refrigerated areas there is normally enough air flow from evaporator fans to mix the refrigerant fairly well in the room. In all locations, 25 ppm is the first alarm point and this is intended for personnel protection. To best protect personnel, the sample should be representative of what they are breathing ~ 5 feet off of the floor. Most importantly, the sensor needs to be easily accessible for the required 6-month calibration and output testing. An untested safety system only takes a few years to become a nonworking safety system. The breathing zone is the best height to satisfy all of the above concerns.

## **Gas Detection Panel (or PLC)**

The gas detection system should be powered with a dedicated branch circuit from an emergency generator backup system that can operate the system in the event of a power outage. An uninterruptable power supply (UPS) that can run the system for a few minutes during the transition to emergency generator power should be utilized. All wire runs should be supervised with the controller indicating a fault if communication with a sensor is lost. Loss of power to the system should send a fault indication to a monitored location.

Any alarm condition should send a signal to a monitored location. This can be in the facility such as a control room or guard shack. It can also be a building monitoring company, an auto-dialer, or other notification system that notifies responsible personnel 24/7.

All output functions should be configured to latch, so even if ammonia concentrations fall below the setpoint, a manual reset is required under the supervision of a qualified operator. This is necessary to protect against repeating a leak scenario that has been successfully detected and mitigated.

## **CO2 Cascade systems**

For CO2 cascade systems, ammonia and CO2 detection are both required in the compressor room which contains the ammonia system and the cascade heat exchanger. CO2 detection is required instead of ammonia detection in refrigerated and process areas. Detection system design and output functions are similar with the difference being the CO2 sensor selected, warning setpoints at 0.5% (5,000 ppm) (OSHA 8 hour TWA) and alarm setpoints at 1.0%.

One controller can support a combination of ammonia and CO2 sensors. One caveat to keep in mind is that unlike ammonia, CO2 is always present in air, and concentrations can build up to these levels in a facility from sources other than a leak in the refrigeration system. Common examples are dry ice usage and normal personnel respiration in a non-ventilated room. CO2 sensors should be mounted in the breathing zone ~ 5 feet off of the floor.

## Specifications:

Table 2: Equipment table

Part Number	Description	Application
GG-6	Six channel controller	Monitor gas detection system
GG-XM	Eight channel expansion module	Additional monitoring capability
GG-RD1	Remote display for GG-6	Remote monitoring of gas detection system
EM2	Entrance monitor	Outside compressor room doorways
UPS-1000VA-LCD	Uninterruptible power supply	Backup Power for GG-6
SHA-24-BLUE	Strobe/Horn assembly 24vdc	Audio Visual
GG-NH3-100	0/100 ppm electrochemical sensor	Refrigerated Area
GG-NH3-250	0/250 ppm electrochemical sensor	Compressor Room
GG-NH3-2%	0/2% catalytic bead sensor	Compressor Room shutdown
GG-VL2-NH3	0/1% vent line sensor	HP relief header, above roofline
GG-CO2-3%	0/3% infrared sensor	CO2 refrigeration systems

Table 3: Warning and Alarm Setpoints table

Room	Warning / Alarm setpoints
Refrigerated areas	25 ppm / 35 ppm
Compressor Room (0-250 ppm)	25 ppm / 150 ppm
Compressor Room Shutdown (0-2%)	1% / 2%
Vent Line	1.0%
Carbon Dioxide refrigerated area	0.5% / 1.0%

### 1. Equipment

#### a. Equipment notes

- i. All controllers and sensors shall be manufactured by CTI - phone number 866-394-5861.
- ii. See Equipment table for part numbers and function descriptions.
- iii. See Warning and Alarm setpoints table for recommended setpoints.

#### b. Controller

- i. Provide a GG-6 controller and necessary Expansion Modules to monitor all fixed sensors. The controller shall be equipped with programmable alarm relays to activate external horn/strobes, exhaust fans, monitoring systems, and shut down equipment.
- ii. The controller shall provide three alarm setpoints per channel.
- iii. The controller and expansion modules shall provide 4/20 mA signal inputs.
- iv. The controller and expansion modules shall provide +24 Vdc to power all connected sensors.
- v. The controller shall provide an LCD operator interface for simple menu-driven programming.
- vi. The controller shall provide a watertight enclosure to protect electronics and allow for outdoor installations where necessary.
- vii. The controller shall provide a horn relay which is silenceable from front panel silence key.
- viii. The controller shall provide an alarm log to record and store all events.
- ix. The controller shall provide a calibration mode which locks relay outputs for sensor maintenance and calibration.
- x. Controller shall supervise wire runs and indicate a fault if communication with sensors is lost.
- xi. Power controller with dedicated branch circuit using Uninterruptible power supply (UPS) backed up by emergency generator to provide 24 hour operation in the event of a power outage.

#### c. Entrance Monitors

- i. Provide an EM2 entrance monitor outside each compressor room entrance.
- ii. Entrance monitor shall terminate 4-20 mA signal from sensor and retransmit same to controller.
- iii. Entrance monitor to provide a digital display to warn operators of ammonia concentration present prior to entering compressor room.
- iv. Entrance monitor shall have on-board 8 amp relay.
- v. Entrance monitor shall have potted electronics to protect circuit board and components from & corrosion.
- vi. Entrance monitor shall have a polycarbonate enclosure to prevent corrosion.
- vii. Entrance monitor shall have a linear 4/20 mA output signal.

- d. Horn/strobes
  - i. Provide (1) or more SHA-24-Blue horn/strobes inside the compressor room and one at each outside entrance of the compressor room
  - ii. Horn/strobe shall be labeled "Ammonia" for easy at-a-glance interpretation of the alarm.
  - iii. Horn/strobe shall be rated for outdoor use to prevent corrosion.
  - iv. The sound level shall be at least 15 dBA above the average ambient sound level and 5 dBA above the maximum sound level of the area.
- e. Reset Switch
  - i. Provide (1) SB-R1 reset switch inside the compressor room.
  - ii. The switch shall be wired to the remote reset wire terminals of the GG-6 controller

## 2. Sensors

- a. Compressor Room 0-250 ppm
  - i. Provide (2) GG-NH3-250 ammonia gas sensors in Compressor Rooms 4000 square feet or less. Install an additional sensor for each 2000 square feet.
  - ii. Locate sensors in the breathing zone – 5 feet off the floor.
  - iii. Locate one sensor below the continuous ventilation fan so it samples airflow from throughout the room.
  - iv. Locate other sensor(s) evenly distributed throughout the room.
  - v. The sensor shall have potted electronics to protect circuit board and components.
  - vi. The sensor shall have a polycarbonate enclosure to prevent corrosion.
  - vii. The sensor shall provide a temperature controlled enclosure for use in any area for improved cell life.
  - viii. The sensor shall have a linear 4/20 mA output signal.
- b. Compressor Room Shutdown 0-2%
  - i. Provide (1) GG-NH3-2% ammonia gas sensor for each Compressor Room.
  - ii. Locate sensor 5 feet off the floor below the emergency ventilation fan so it samples airflow from throughout the room.
  - iii. The sensor shall have potted electronics to protect circuit board and components.
  - iv. The sensor shall have a polycarbonate enclosure to prevent corrosion.
  - v. The sensor shall provide a temperature controlled enclosure for use in any area for improved cell life.
  - vi. The sensor shall have a linear 4/20 mA output signal.
- c. Vent Lines
  - i. Provide (1) GG-VL2-NH3 ammonia vent line sensor for each high-pressure relief line discharge to atmosphere.
  - ii. Install vent line sensor utilizing supplied mounting kit. Locate outdoors, 3 feet off of the roof. Install utilizing supplied mounting kit with tee test port pointed down.
  - iii. The sensor shall have potted electronics to protect circuit board and components from moisture and corrosion.
  - iv. The sensor shall have a stainless-steel enclosure to prevent corrosion.
  - v. The sensor shall have a linear 4/20 mA output signal.
- d. Ammonia refrigerated areas
  - i. Provide GG-NH3-100 ammonia gas sensors near evaporators, valve groups, and other equipment with sensors installed no further than 30 horizontal feet from the potential leak source (50 feet if more than 3 sensors in a room).
  - ii. Locate sensors in the breathing zone – 5 feet off of the floor.
  - iii. The sensor shall have potted electronics to protect circuit board and components from moisture and corrosion.
  - iv. The sensor shall have a polycarbonate enclosure to prevent corrosion.
  - v. Sensor shall provide a temperature controlled enclosure for use in any environment for improved cell life.
  - vi. The sensor shall have a linear 4/20 mA output signal.
- e. Carbon Dioxide refrigerated areas
  - i. Provide GG-CO2-3% carbon dioxide gas sensors near evaporators, valve groups, and other equipment with sensors installed no further than 30 feet from the potential leak source (50 feet if more than 3 sensors in a room).
  - ii. Locate sensors in the breathing zone – 5 feet off of the floor.
  - iii. The sensor shall have potted electronics to protect circuit board and components from moisture and corrosion.
  - iv. The sensor shall have a polycarbonate enclosure to prevent corrosion.
  - v. Sensor shall provide a temperature controlled enclosure for use in any environment for improved cell life.
  - vi. The sensor shall have a linear 4/20 mA output signal.

# Explanatory Material

Back in 2012, there were six different U.S. model codes and standards written by different agencies regulating ammonia refrigeration, including ANSI/IIAR 2-2014, ASHRAE 15, NFPA-1, UMC, IFC, and IMC. Gradually, these agencies have started to adopt IIAR-2 standards, rather than continue to write their own. As of 2021, the IIAR-2 standards have become the generally accepted industry standard to which most other organizations now defer.

## Appendix 1: Summary of Ammonia Detection Code Requirements

ANSI/IIAR 2-2021	ASHRAE 15-2019	NFPA 1-2021	UMC-2021	IFC-2021	IMC-2021
	Comply with IIAR 2				

## Appendix 2: IIAR 2-2021 Standards

Location	Description/Details		Detection Level	
Machinery Room			Machinery Room Detection	
Area containing refrigeration equipment located outside of a machinery room	Less than 100 HP	Potential of 40,000 ppm? Yes	Level 3 Detection	
		Potential of 40,000 ppm? No	Level 1 Detection	
Equipment Pits			Level 3 Detection	
Refrigerated Spaces			Level 1 Detection	
Packaged Systems	Indoor	Over 100 HP Inside a machinery room	Machinery Room Detection	
		Under 100 HP Outside of machinery room	Potential of 40,000 ppm? Yes	Level 3 Detection
			Potential of 40,000 ppm? No	Level 1 Detection
	Outdoor	Free Aperture*? Yes	No detection needed	
		Free Aperture*? No	Under 100 HP	Level 1
	Over 100 HP		Machinery Room Detection	

## Appendix 3: Detection Levels Defined

	IIAR 2-2021 Minimum Standard		CTI Recommendation	
Machinery Room Detection	At least 2 detectors with identical sensing ranges		At least 2 detectors with identical sensing ranges <i>Plus 1 high range detector</i>	
	25 ppm	Notify a monitored location Activate audio alarms and visual indicators	25 ppm	Notify a monitored location Activate audio alarms and visual indicators
	150 ppm	Activate emergency ventilation	150 ppm	Activate emergency ventilation
	40,000 ppm	De-energize refrigerant compressors, pumps, and normally closed valves	20,000 ppm	De-energize refrigerant compressors, pumps, and normally closed valves
Level 1 Detection	At least 1 detector		At least 1 detector within 30 feet of potential leak sources	
	25 ppm	Notify a monitored location	25 ppm	Notify a monitored location <i>Activate audio and visual indicators</i>
Level 3 Detection	At least 1 detector		At least 1 detector	
	25 ppm	Notify a monitored location Activate Audio alarms and visual indicators Close valves feeding liquid and hot gas De-energize pumps, fans, and motors that are part of the refrigeration system Activate emergency exhaust systems	25 ppm	Notify a monitored location Activate audio alarms and visual indicators Close valves feeding liquid and hot gas De-energize pumps, fans, and motors that are part of the refrigeration system Activate emergency exhaust systems

## Additional Audio-Visual Requirements

Audible alarms shall provide a sound pressure level of 15 dBA above the average ambient sound level and 5 dBA above the maximum sound level of the area in which it is installed.

Alarms shall be identified by signage adjacent to visual and audible alarm devices.

Audible alarms, visual indicators and emergency exhaust systems that are activated at 25 ppm can be automatically reset when concentration drops below 25 ppm.

Visual indicators and emergency exhaust systems that are activated at 150 ppm or higher must continue to operate until they are manually reset by a switch located inside the machinery room. Audio alarms that are activated at 150 ppm or higher can be reset remotely.

## Definitions

**Packaged System:** A stand-alone, complete, plug-and-play refrigeration system that is built off-site, mounted on a steel base or skid and delivered as a single unit to an end-user facility. A packaged system can be designed for indoor or outdoor installation and can be enclosed or unenclosed.

**Enclosure:** An area that is surrounded by walls or a fence. IIAR 5.15.1 states that enclosures for ammonia equipment shall be suitable for the installation location and shall be provided with protection from physical and environmental damage as required for the installed location.

**Free Aperture:** Free aperture refers to the amount of natural, passive ventilation of an enclosed or partially enclosed area. Packaged systems that are located outdoors and do not have sufficient free aperture must have ammonia detection. To calculate the free aperture of an enclosure, use the formula listed in IIAR 7.3.2 as follows:

The free-aperture cross-section for natural ventilation shall not be less than:

$$F = G^{0.5} (I-P) \text{ (using ft}^2 \text{ and lbs of NH}_3\text{)}$$

$$F = 0.138G^{0.5} (SI) \text{ (using m}^2 \text{ and kgs of NH}_3\text{)}$$

where:

F= the free opening of the area, ft<sup>2</sup> (m<sup>2</sup>)

G= the mass of ammonia in the largest independent circuit, any part of which is located within the enclosure or structure, lbs. (kg)

**Level 2 Ammonia Detection and Alarm.** The normative parts of this standard currently require only level 1 and level 3 ammonia detection and alarm levels. Information regarding level 2 is retained here for reference. Designers or end users may wish to use level 2 in lieu of level 1. If level 2 ammonia detection and alarm are implemented, it would have the following features:

1. At least one ammonia detector would be provided in the room or area.
2. The detector would activate an alarm that reports to a monitored location so that corrective action can be taken at an indicated concentration of 25 ppm or higher.
3. Audible and visual alarms would be provided inside the room to warn that when the alarm has activated access to the room is restricted to authorized personnel and emergency responders.

## Exceptions

1. In machinery rooms, the use of a single detector is permitted if the failure or maintenance of the detector that causes the detection system to become inoperable, starts emergency ventilation system that shall continue to operate until the detection system is restored.
2. Unoccupied areas with continuous piping that has been joined by welding and does not include valves, valve assemblies, equipment, or equipment connections do not require level 1 detection and alarm.
3. Where not prohibited by the AHJ, rooms or areas in industrial occupancies that are normally occupied 24 hours/day and are regularly patrolled when the rooms' functions are idled for scheduled downtime and are provided with an alternative to fixed detection and alarm equipment do not require level 1 detection and alarm. A means for emergency notification and initiation of alarm response shall be provided.
4. Where not prohibited by the AHJ, alternatives to fixed ammonia leak detectors shall be permitted for areas with high humidity or other harsh environmental conditions that are incompatible with detection devices. A means for emergency notification and initiation of alarm response shall be provided.

Massachusetts General Laws, Chapter 149, Sections 26 to 27H

LAUREN JONES  
Secretary

MICHAEL FLANAGAN  
Director

**Awarding Authority:** City of Watertown  
**Contract Number:** 2023-049 **City/Town:** WATERTOWN  
**Description of Work:** Furnish and install a new Ammonia Detection System for Hockey Rink  
**Job Location:** 1 Paramount Place, Watertown, MA 02472

**Information about Prevailing Wage Schedules for Awarding Authorities and Contractors**

- **The wage rates will remain in effect for the duration of the project, except in the case of multi-year public construction projects. For construction projects lasting longer than one year, awarding authorities must request an updated wage schedule no later than two weeks before the anniversary of the date the contract was executed by the awarding authority and the general contractor.** For multi-year CM AT RISK projects, the awarding authority must request an annual update no later than two weeks before the anniversary date, determined as the earlier of: (a) the execution date of the GMP Amendment, or (b) the execution date of the first amendment to permit procurement of construction services. The annual update requirement is not applicable to 27F "rental of equipment" contracts. **The updated wage schedule must be provided to all contractors, including general and sub-contractors, working on the construction project.**
- This wage schedule applies only to the specific project referenced at the top of this page and uniquely identified by the "Wage Request Number" on all pages of this schedule.
- An Awarding Authority must request an updated wage schedule if it has not opened bids or selected a contractor within 90 days of the date of issuance of the wage schedule. For CM AT RISK projects (bid pursuant to G.L. c.149A), the earlier of: (a) the execution date of the GMP Amendment, or (b) the bid for the first construction scope of work must be within 90-days of the wage schedule issuance date.
- The wage schedule shall be incorporated in any advertisement or call for bids for the project as required by M.G.L. c. 149, § 27. The wage schedule shall be made a part of the contract awarded for the project. The wage schedule must be posted in a conspicuous place at the work site for the life of the project in accordance with M.G.L. c. 149 § 27. The wages listed on the wage schedule must be paid to employees performing construction work on the project whether they are employed by the prime contractor, a filed sub-bidder, or a sub-contractor.
- Apprentices working on the project are required to be registered with the Massachusetts Division of Apprentice Standards (DAS). Apprentices must keep their apprentice identification card on their persons during all work hours on the project. An apprentice registered with DAS may be paid the lower apprentice wage rate at the applicable step as provided on the prevailing wage schedule. **Any apprentice not registered with DAS regardless of whether they are registered with another federal, state, local, or private agency must be paid the journeyworker's rate.**
- Every contractor or subcontractor working on the construction project must submit weekly payroll reports and a Statement of Compliance directly to the awarding authority by mail or email and keep them on file for three years. Each weekly payroll report must contain: the employee's name, address, occupational classification, hours worked, and wages paid. Do not submit weekly payroll reports to DLS. For a sample payroll reporting form go to <http://www.mass.gov/dols/pw>.
- Contractors with questions about the wage rates or classifications included on the wage schedule have an affirmative obligation to inquire with DLS at (617) 626-6953.
- Contractors must obtain the wage schedules from awarding authorities. Failure of a contractor or subcontractor to pay the prevailing wage rates listed on the wage schedule to all employees who perform construction work on the project is a violation of the law and subjects the contractor or subcontractor to civil and criminal penalties.
- Employees not receiving the prevailing wage rate set forth on the wage schedule may file a complaint with the Fair Labor Division of the office of the Attorney General at (617) 727-3465.

**Additional Apprenticeship Information:**

Minimum wage rates for apprentices employed on public works projects are listed above as a percentage of the pre-determined hourly wage rate established by the Commissioner under the provisions of the M.G.L. c. 149, ss. 26-27D. Apprentice ratios are established by the Division of Apprenticeship Training pursuant to M.G.L. c. 23, ss. 11E-11L.

All apprentices must be registered with the Division of Apprenticeship Training in accordance with M.G.L. c. 23, ss. 11E-11L.

All steps are six months (1000 hours.)

Ratios are expressed in allowable number of apprentices to journeymen or fraction thereof, unless otherwise specified.

\*\* Multiple ratios are listed in the comment field.
